**STAMP** — **Project Structure**

**Config**
runtime configuration settings used by application as well as a set of application helper function
- assets
- env
- lib
- config.js

**modules**
The modules folder is home to the main front-end AngularJS logic for the application. As you create various front-end capabilities and features in the application, each one will reside within this folder as a standalone module.
- core
- users

**node_modules**
- .bin
- @types
- abbrev
- accepts
- accord
- ...

**public**
This folder contains all the static front-end files used by the app to be served out.
- lib
- humans.txt
- robots.txt

**scripts**
- generate-ssl-certs.sh
- reset-password.js
- setup-protractor.sh
- upgrade-users-sparse-index.js

**others**
- .bowerrc
- .csslintrc
- dockerignore
- .editorconfig
- .eslintrc.js
- .gitignore
- .slugignore
- .travis.yml
- app.log
- bower.json
- CHANGELOG.md
- CONTRIBUTING.md
- docker-compose.yml
- docker-compose-production.yml
- Dockerfile
- Dockerfile-production
- gulpfile.js
- karma.conf.js
- LICENSE.md
- manifest.yml
- package.json
- Procfile
- protractor.conf.js
- README.md
- server.js
- test.js
- UPGRADE.md
